#### Customer Needs

Conveniently located in a sprawling fifteen acre facility, ATEL has forged the reputation as the Mid-Atlantic's premier bus and coach sales and service center. Their commitment to superior customer service has enabled ATEL to successfully provide high quality, reliable and comprehensive bus sales and transportation support services for both the public and private sectors. With a substantial new and used vehicle inventory to fit every need, and a 70,000 square foot repair facility, ATEL was looking to implement an advanced, user-friendly video surveillance security system to protect its own and customer assets across the entire enterprise. In addition, fault determination for damage to buses stored and maintained at the ATEL facility is one of the requirements in addition to possible shrinkage and loss prevention.

#### Benefits:

Recording of events and security incidents, providing a comprehensive record 24x7x365

Deter crime and provide the authorities with leads

Unified viewing of live events and recorded video across multiple sites

Centralized, web-based, authenticated accounts for easy management access to the video surveillance security infrastructure

Enables business process management and refinement

Assists in prevention of possible and unwanted acts of vandalism

#### The eView Solution

A powerful, user friendly, and scalable video surveillance solution that can lend itself to a systematic deployment was the key element in setting up ATEL's futuristic security infrastructure. eView Technologies' latest generation of computer vision technology is revolutionizing concepts, applications, and products in video surveillance and CCTV. This is of prime relevance to security for large outdoor facilities, such as ATEL, which has a high volume of heterogeneous traffic and is easily accessed on foot. Open facilities are highly appealing to criminals and terrorists since they are in close proximity to public areas (roads, residences, city, etc.). eView Technologies' intelligent video surveillance security software capabilities provide ATEL 24x7 outdoor and indoor event recording in any type of weather day or night.
