Customer Needs

With a proud track record of persistent innovations, LogiXML has helped in the success of their customers. Used by thousands of small and medium-sized organizations worldwide, LogiXML products are built on standards-based technologies for easy integration. As a purely Web-based Business Intelligence (BI) provider, LogiXML helps a business achieve its goals and objectives by empowering all business users to access, analyze and share business information across the organization. LogiXML required convergence of Physical and IT security, to better protect its corporate infrastructure and client data.

The eView Solution

eView Technologies implemented a security solution for LogiXML that provides surveillance security and access control of the server room, office space and entrances. All camera video is recorded and stored, enabling live or playback observation of the location. Camera video can be monitored locally, or remotely using Internet access thereby enabling management the flexibility to observe activities at the office at any time in protecting corporate assets.

Benefits:

Monitor and detect suspicious activities as a person entering an unauthorized area, a bag left unattended, or an individual loitering

Chiefly promotes productivity and protects employees

Prevents theft, violence and sabotage

Track outsiders and visitors on the premises
