eView Technologies' eView Manager 3.0 Goes on Sale

eView Technologies' Unleashes Intelligent Video Surveillance Security Platform and bolstered its Industry Position with Successful Implementations and Integrations

WASHINGTON, DC (April 4, 2007)...eView Technologies, a Video Surveillance Security and Automation Management company providing intelligent video surveillance technologies, today announced a major upgrade to its successful eView Manager video surveillance software suite. eView Manager 3.0 goes on sale for all new customers and is a major upgrade for existing customers who have purchased eView Manager software as of 12/15/05. eView Manager 3.0 is a comprehensive, flexible and user-friendly system to monitor, record and manage video surveillance security footage, and documentation for retrieval, analysis and prevention.

For organizations or security personnel worried about security and safety, whether it is physical security, access control or intrusion detection, eView Manager's video surveillance security suite brings that to a whole new level of capabilities. To better address the needs of today's global video surveillance security industry, the eView Manager 3.0 is evolving into a more intimate event focused, on targeted, personalized security events software suite with various modules to form a comprehensive security platform.

"eView Manager 3.0 is a major release and a key milestone in the video surveillance and security product's history. eView Manager has consistently led our customer base implementation and integration with complete success, providing superior usability and productivity," said Kevin Shahbazi, eView Technologies' President and CEO. "eView Technologies' fantastic reputation, combined with our eView Manager 3.0 mature offering is highly complementary to our clients' existing IT infrastructure".

eView Manager is compatible with a host of camera stacks, and security formats and leverages the benefits of other eView Technologies' products to give users a richer experience than other tools provide.

The announcement comes as eView Technologies is making increasingly public moves to carve a legitimate place for itself in the mainstream digital video surveillance security industry.

Support for Microsoft Internet Explorer used to remotely access and view digital video surveillance information and images are originally enabled by eView Web Manager version 2.1. eView Technologies makes secure access to video surveillance camera infrastructure easier, by enabling centralized web based authenticated user accounts.

eView Technologies' suite protects against internal fraud and theft, sabotage, malicious acts and legal exposure. It also helps an organization to enjoy the same protection outside their physical boundaries. eView Manager is designed to work with camera stacks from a vast array of manufacturers. Specific features and functions can be studied in detail at the eView Technologies web site, www.eviewtechnologies.com.

About eView Technologies

Confidently helping organizations to protect their enterprise, eView Technologies develops, markets, and supports an integrated digital video surveillance security and productivity suite. During the past two decades and prior to founding, eView Technologies' founders and executive management team have earned a global reputation for innovative, standards-based, security solutions and have captured numerous national and international industry awards. As an Independent Software Vendor (ISV), eView Technologies' security suite includes a wide range of products, productivity solutions, cryptographic and e-security applications. eView Technologies markets and promotes its solutions worldwide directly and through a wide variety of partners.
